

GREEN INFRASTRUCTURE STATEMENT

For Development

@

6 Criccieth Grove,

Swansea Road,

Merthyr Tydfil,

CF48 1JY

DETAILS OF EXISTING

The whole site is a work in progress, the North , South and Eastern boundaries being timber fences, the Western boundary is open to the road for vehicle access for two thirds of its length with a dwarf wall along the remainder. To the front and side there is a large brick pavia area for vehicle parking with a small area to the Northern part of the front garden of grass and shrubs in poor condition. The rear garden has some small trees and shrubs to the Eastern boundary with the rest of the garden poor quality grass, all in poor condition.

PROPOSED GREEN INFRASTRUCTURE TO BE PLANTED

Within the limited scope of the site and the precise layout yet to be decided, the proposed soft and hard landscaping will have the green infrastructure as a priority, and is proposed to include a 1m border consisting of shrubs, flowers and bushes (to be decided) all with a view to attract wildlife.

BIODIVERSITY ENHANCEMENT

Biodiversity will be enhanced by the introduction of the planned shrubs, bushes and flowers by attracting wildlife, bird and bat boxes will be introduced. (types, sizes and position will be supplied to the local authority prior to erection)

CONCLUSION

As this is a minor development with much of the design and layout yet to be decided, there is limited opportunity to introduce many green infrastructure measures, what will be introduced will be designed to enhance biodiversity as much as possible while considering the neighbours. All work carried out will be in consultation with the local authority and the relevant departments and experts. The aim is to make the site as attractive to wildlife as possible and an attractive place to live.
