## Comments

Regarding the suggested bird box – the Schwegler 1sp option would be preferred. Its position would need to be marked on an official plan. NB Document 1 states this will be erected on the rear elevation. This will require amendment - as bird boxes must be erected facing east or north, rather than, for example, (in this case) south.

In addition, there is more that can be achieved on this site.

There is scope for extending the existing hedgerow along the northeastern boundary (see indicative yellow arrow below) to improve both biodiversity and connectivity. A mix of at least x3 native species or local (if not Welsh) provenance must be used. In addition, there are opportunities for the creation of a small wildflower area – for example, see the grassland area in the image below.

Details will be required along with a brief description of how these habitats will be managed long term and how this will be funded.
