To whom it may concern,

I can confirm that BE Ecological Ltd have visited the site to undertake an initial bat inspection survey. The property was identified as being of high potential for roosting bats with droppings present within the building, confirming the building as a bat roost. The building will require further survey effort in the appropriate season (May-September). As such, the production of the initial report has been put on hold until the results of these surveys are available.

On completion of these surveys, a report will be produced to include the results of the initial bat inspection survey and subsequent activity surveys.

If you have any questions or queries, please do not hesitate to contact us.

Thank you,

Beth Evans

Director/Principal Ecologist
