Annwyl Syr/Madam / Dear Sir/Madam,

**BWRIAD / PROPOSAL: CONSTRUCT PORTACABIN TO PROVIDE CLASSROOMS,
ASSOCIATED FACILITIES AND PLAYGROUND**

**LLEOLIAD / LOCATION: GREENFIELD SCHOOL DUFFRYN ROAD PENTREBACH
MERTHYR TYDFIL CF48 4BJ**

Thank you for consulting Cyfoeth Naturiol Cymru / Natural Resources Wales about the above, which we received on 27th April 2023.

We have concerns with the application as submitted because inadequate information has been provided in support of the proposal. To overcome these concerns, you should seek further information from the applicant regarding foul drainage. If this information is not provided, we would object to this planning application. Further details are provided below.

Foul Drainage

We note that the portacabin consists of two classrooms, kitchenette, store, toilet facility and a portaloo. No information has been provided on the foul drainage arrangements and we note that the application site is within an area served by the public sewer. Further information should be submitted to demonstrate that either the foul drainage will be discharged to the main sewerage system or that it is not reasonable to connect to the mains.

We refer you to Welsh Government Circular 008/2018 on the use of private sewerage in new development, specifically paragraphs 2.3-2.5 which stress the first presumption must be to provide a system of foul drainage discharging into a public sewer. Only where having taken into account the cost and/or practicability it can be shown to the satisfaction of the local planning authority that connection to a public sewer is not feasible, should non-mains foul sewage disposal solutions be considered. We note the proposed development is in a

publicly sewerage area and as such, we would expect the site to connect to the mains sewerage system.

We therefore advise that if they haven't already done so, the Applicant should thoroughly investigate the possibility of connecting to the foul sewer by taking the following steps:

- Approach the sewerage undertaker to reach an agreement for a connection to the foul sewer.
- If the sewerage undertaker refuses connection to the public sewer, request that they adopt the proposed treatment system.
- If the sewerage undertaker refuses both of the above, you must appeal the refusal with Ofwat.

For further details please see [Natural Resources Wales / Private sewage treatment in an area with a public sewer](#)

The Applicant should be aware that should a connection to the mains sewer not be feasible, they will also need to demonstrate that the proposal would not pose an unacceptable risk to the water environment. Welsh Government Circular 008/2018 advises that a full and detailed consideration be given to the environmental criteria listed under paragraph 2.6 of the Circular, in order to justify the use of private sewerage.

As stated above, we expect developers discharging domestic sewage to connect to the public foul sewer where it is reasonable to do so. We will not normally grant a discharge permit for a private sewage treatment system where it is reasonable to connect to the public foul sewer. We also expect discharges of trade effluent to connect to the public foul sewer where it is reasonable to do so and subject to the sewerage undertaker granting a trade effluent consent or entering into a trade effluent agreement.

Applicants wishing to operate a private sewerage system will need either to apply to us for an environmental permit or register with us for an exemption from the permit requirement. Septic tanks and small sewage treatment works that meet certain criteria may be registered as exempt.

A step by step guide to registering an exemption can be found on our [website](#).

If the septic tank or private sewage treatment system is not eligible for an exemption, the Applicant will need to apply for an environmental permit, further details can be found [here](#). Should a permit be required further information may be needed as part of that application process. The Applicant is therefore advised to contact us for pre-application advice at the earliest opportunity to try to ensure that there is no conflict between any planning permission granted and the permit requirements. Further details on how to access our pre-application advice service can be found [here](#).

It is important to note that a grant of planning permission does not guarantee that a permit will be granted. A proposal may be deemed unacceptable either because of environmental risk or because upon further investigation, a connection to mains sewer was

feasible. Applicants are encouraged to ensure they have all the required permissions, consents, permits and any other approvals in place prior to commencement of works on the site.

Please note, lack of capacity or plans to improve capacity in the sewer is not a valid reason for a sewerage undertaker to refuse connection under Section 106 of the Water Industry Act 1991 and we may refuse to issue an environmental permit for private treatment facilities in such circumstances.

Where private sewage treatment/disposal facilities are utilised, they must be installed and maintained in accordance with British Standard 6297 and Approved Document H of the Building Regulations. We also refer the Applicant to Guidance for Pollution Prevention 4 on the NetRegs [website](#), which provides further information.

Our comments above only relate specifically to matters included on our checklist, *Development Planning Advisory Service: Consultation Topics* (September 2018), which is published on our [website](#). We have not considered potential effects on other matters and do not rule out the potential for the proposed development to affect other interests.

We advise the applicant that, in addition to planning permission, it is their responsibility to ensure they secure all other permits/consents/licences relevant to their development. Please refer to our [website](#) for further details.

Advice for the Developer

Pollution Prevention: Due to the proximity of the site to watercourses, all works at the site must be carried out in accordance with GPP5 and PPG6: 'Works in, near or over watercourses' and 'Working at construction and demolition sites' which are available on the following website: <http://www.netregs.org.uk/environmental-topics/pollution-prevention-guidelines-ppgs-and-replacement-series/guidance-for-pollution-prevention-gpps-full-list/>

If you have any queries on the above, please do not hesitate to contact us.

Yn gywir / Yours faithfully

Tanya Leck
