WINDOW REPLACEMENTS

All of the wooden window frames at The Grange are starting to show signs of age. All windows are double glazed but using glazing that was originally installed at least 25 years ago, meaning that they are not as thermally efficient as modern glazing units.

Photos of all 4 sides of the house showing the existing windows and schematics of those windows with proposed design changes are included below.

FRAME MATERIALS

We propose to replace them with new frames and modern double glazing. The frames will either be replaced on a like-for-like basis (Hardwood with a white gloss finish) or by timber effect PVCu frames, also with a white finish.

WINDOWS BEING REPLACED WITH DESIGN CHANGES

The front section of the house has four bay windows, two on the ground floor (labelled "Lounge Bay Windows" on the photographs below) and two on the first floor (labelled "Yellow Bedroom" and "Green bedroom"). We are proposing to change the design of the windows in all four bays.

The existing casement windows consist of three sections, one central section with a large, fixed pane of glass and two identical side sections with a fixed upper pane and an openable lower pane.

Each of these three sections will be replaced with sliding sash windows which retain the same dimensions as the existing units.

WINDOWS NOT BEING REPLACED

North East side: Ventilated Pantry window

South West side: Sunroom & Patio door to balcony. These are the only PVCu frames currently installed in the house.

WINDOWS BEING REPLACED WITH NO DESIGN CHANGES

All other windows
