

1no. bat box

1no. bird box

Carbon Basins

Tarmac Driveway

Turning Area

Patio

Grass Cradle

Flower Beds

Raised Planting Beds

Wildflower

Pond

10cm x 10cm hedgehog gap in fence

Existing Access to be retained

Bird box - A house Sparrow Terrace (<https://www.nhbs.com/house-sparrow-terrace-fsc-nest-box>) which provides a nesting site for house sparrows. This box will be installed on the west facing elevation of the proposed annexe at eaves level as soon as building work is completed and in advance of first occupation. The location of the bat box is shown above on Drawing No. ECO-01.

Hedgehog gaps – a 10cm x 10cm hedgehog gap will be created at the base of the boundary treatment running along the driveway of the site. The location of this is shown above on Drawing No. ECO-01

Pond – This will be a typical garden pond with various species of plant and fish. The feature will support insects, etc.

The level of biodiversity enhancements are considered to be proportionate to the scale of the development and therefore acceptable in terms of required biodiversity net gain. The landscaping scheme will also result in overall enhancement.
