

Appendix D - sets out a series of photographs to illustrate the change in the character of the area:

Below in 2009 – Illustrates the extent of mature trees and vegetation along the eastern embankment of the site with limited development in the area.

Below in 2022 – The significant loss of trees and vegetation is clearly evident.

The photograph below (01.2017) was taken at a time when the embankment has been excavated and the trees/vegetation removed.

The photograph below (taken in 09.2022) illustrates the reconstruction of the embankment from the fence line at the top to the bottom fence line. Its design and construction is unclear. The embankment has been planted with conifer trees which does not reflect the native broadleaved trees in the area. This consequently has a negative impact on the quality and character of the Special Landscape Area/Conservation Area.

The photo below (03.2017) illustrates the commercial use of the northern part of the site.

The photo below (06.2017) illustrates the commercial use for parking of vehicles.

The photo below (06.2017) illustrates the area of land around the mobile home that has already been increased in size following the removal of the embankment and trees/vegetation.
