

It's abundance of thorns makes it an excellent security species and its ability to survive continual cutting back are both the reasons why, historically, it has been a core component of native hedges

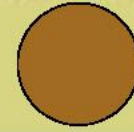

In Spring it is a mass of petit creamy-white flowers and in the autumn produces the characteristic bluey-black fruit which is used to flavour gin. Excellent for wildlife.

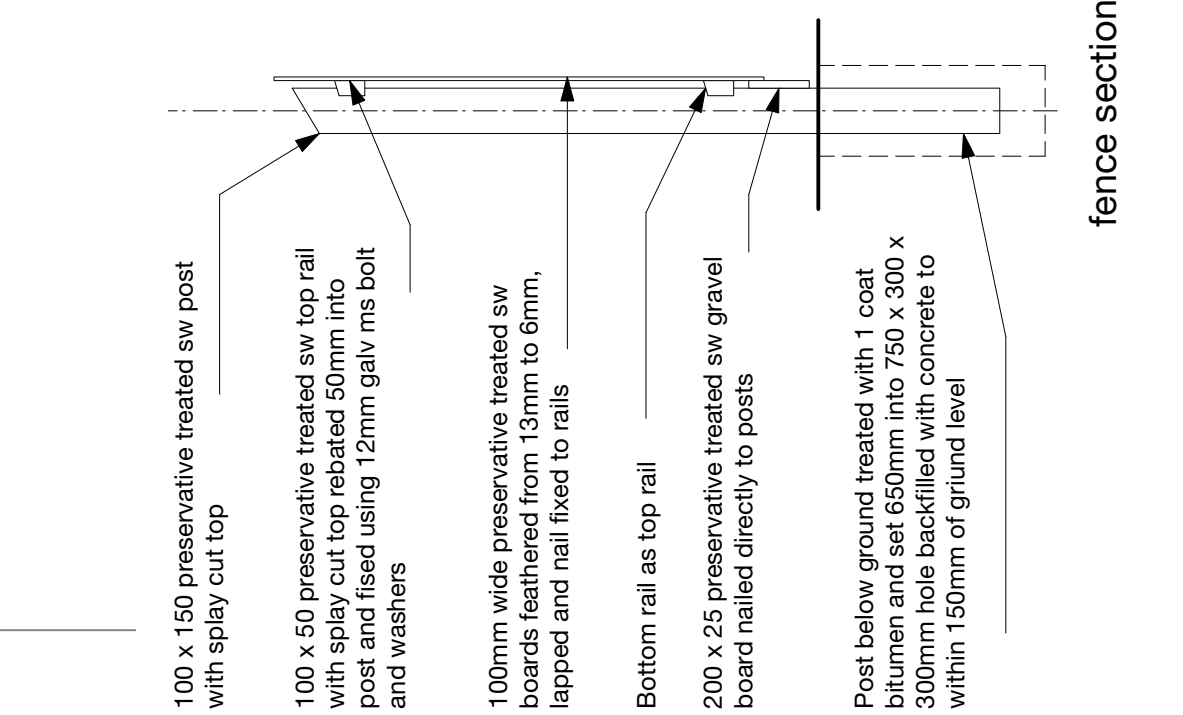

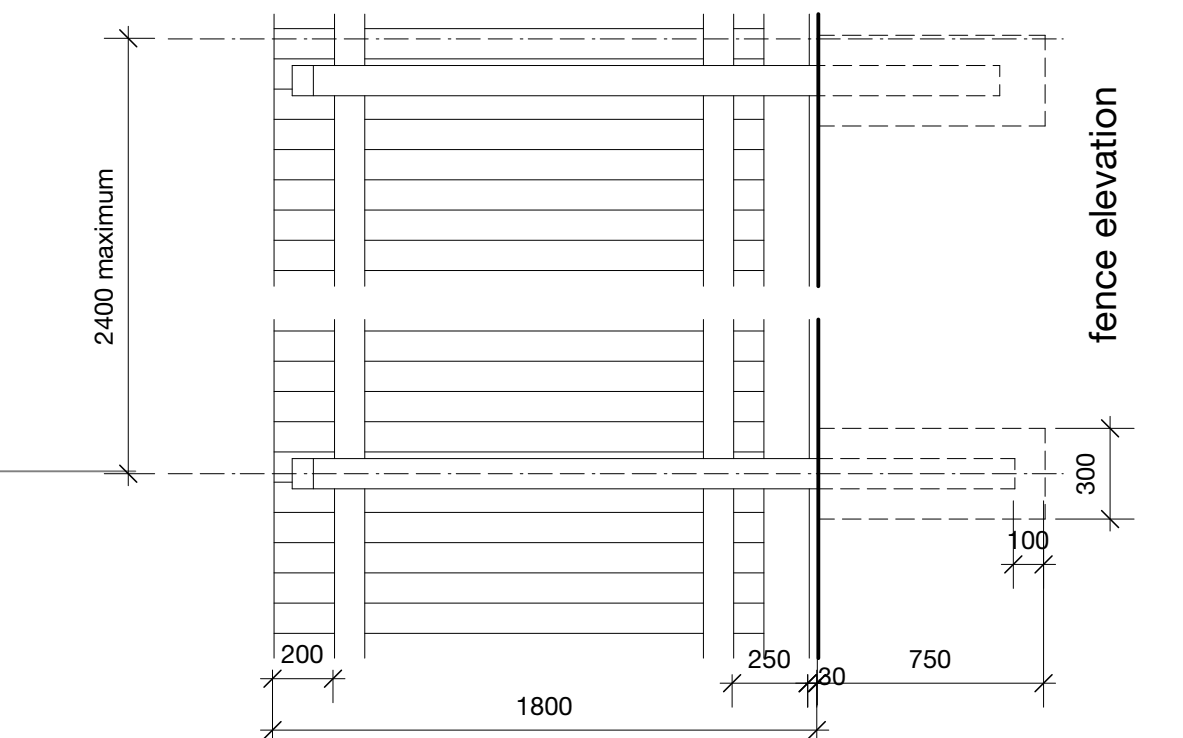

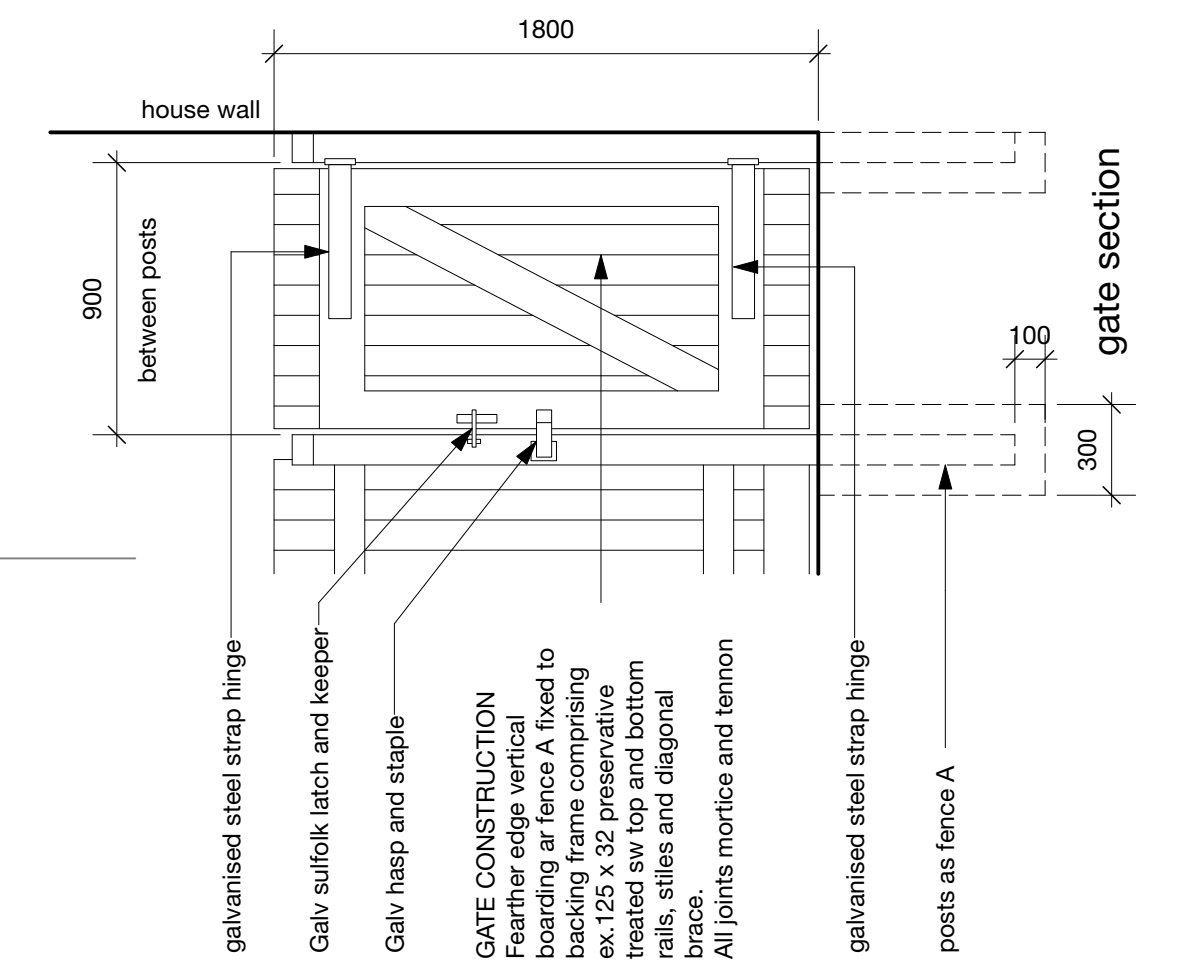

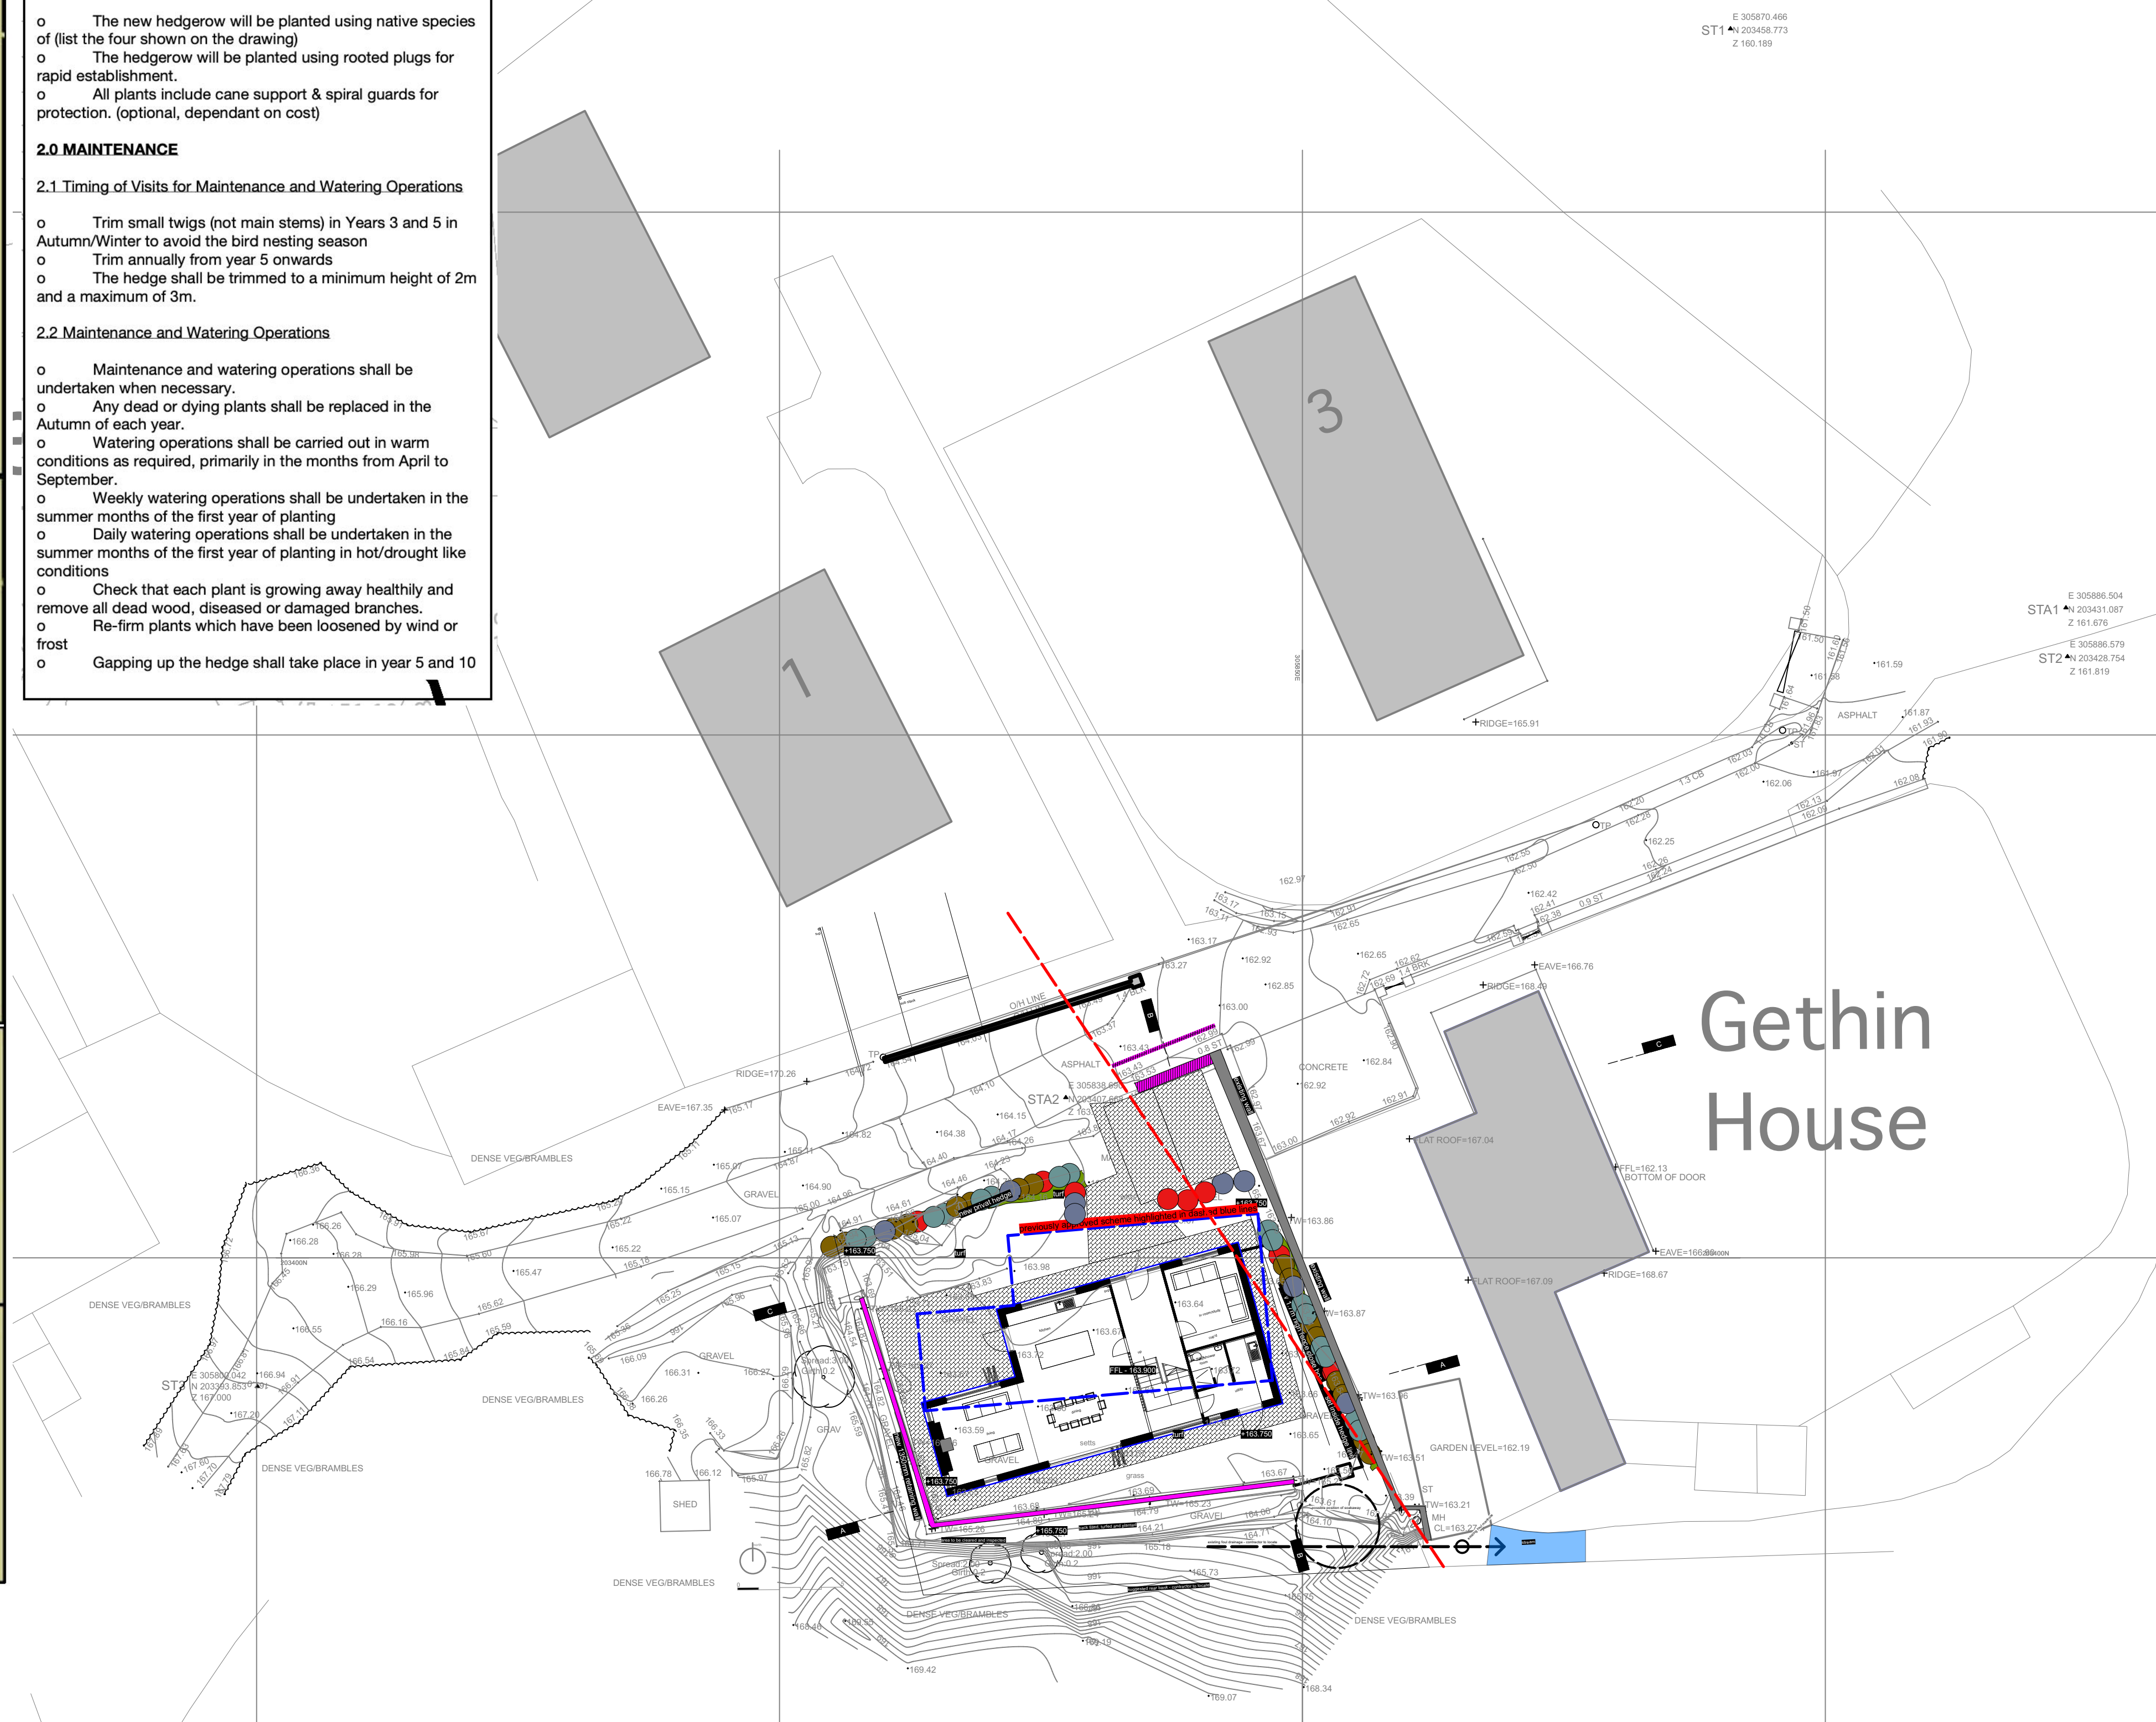

*Acer
campestre*
(Field Maple)

Cornus sanguinea
(Common dogwood)

- o Weekly watering operations shall be undertaken in the summer months of the first year of planting
- o Daily watering operations shall be undertaken in the summer months of the first year of planting in hot/drought like conditions
- o Check that each plant is growing away healthily and remove all dead wood, diseased or damaged branches.
- o Re-firm plants which have been loosened by wind or frost
- o Gapping up the hedge shall take place in year 5 and 10
