The depiction of a wall, fence or hedge does not necessarily represent a legal boundary. It is the clients responsibility to confirm legal boundaries with the vendor.

Unless previously agreed, all services existing on site have been surveyed apart from where access is restricted by vehicles or other significant obstructions.

(Tree symbols), manhole covers will be lifted unless this significantly obstructs the flow of traffic or vehicular access.

Manhole will not be lifted if this were to present any health & safety risks to staff or the public.

Inseparable or cracked covers will not be lifted.

All pipe directions are indicative only and have not been proved unless specifically instructed.

For safety reasons, pipe sizes and directions are estimated from above ground and are therefore approximate values.

All drawing units, levels and dimensions are in metres, unless otherwise stated.

The data used for the computation of the horizontal and vertical control for this survey was recorded using our survey grade GNSS receivers. This data was provided by Leica Geosystems Sprinter RTK correction service. Therefore primary survey control is based on OSGB36(10)

Plotting on paper may lead to a variety of scaling inaccuracies due to paper stretching or inaccurate plotter settings etc.

Therefore any dimensions scaled from a paper reproduction of this survey should be treated with caution.

This drawing must be used in conjunction with all other relevant documentation.
