Unique to Wildcare, the soffit bat box utilises the wasted space above the soffit on a standard roost structure. The entrance is formed by cutting away a 20mm slot in the back of the soffit board against the external wall, and a specially designed plate is then screwed through into the bat box to secure it and to make it a tidy finish.

Virtually invisible, and self-emptying, this product provides a permanent and successful solution to the problems of fixing ugly concrete structures to the outside of new housing.

Dimensions: 30cm long with a 2cm entrance slot.
