Wildwood Ecology

People Planet Purpose

- = Tree with PRF-M
- = Tree with PRF-I
- = Bat flight line

Lighting plans show the area around the lodges are to remain predominantly dark, with flight line observed during previous bat surveys by Wildwood Ecology remaining unlit.

The inset map shows that trees examined during a Ground-level Tree Assessment Survey by Wildwood Ecology in November 2025 containing potential roost features (PRFs) for bats will remain present and unlit.

The above combined with the low-level bollard lighting planned along the paths and wall lights controlled by a PIR motion sensor on the cabins themselves mean that a significant impact on commuting, foraging, or roosting bats is not anticipated given the current plans.

All dimensions must be checked on site and not scaled from this drawing.
