PLANTING SPECIFICATION

Existing planting area to be cleared of all invasive weeds retaining all existing planting and naturalised trees and shrubs.

All new planting to be in individual pits backfilled with 70g tree and shrub planting and 3g slow release fertilizer per pit.

All whip planting to have an individual spiral guard to suit.

All evergreen plants to have individual tree shelter to suit secured to a single 900mm cane.

All new planting to have an individual weed suppressant mulch mat 45mm diameter.

All new planting to be set out in 1m bands allowing for retaining existing established planting.

All new planting at staggered 1m centres in groups of no more than 7 and no less than 3 of the same species.

All new planting to watered prior to placing weed suppressant mats.

The planting shall be carried out between December and March. Watering as required to promote first year establishment.

Maintain weed free ground around the new planting and 1m wide bands until planting is established. After 1yr replace all dead or diseased trees and shrubs

WHIPS AND TRANSPLANTS - All plants shall conform generally to BS 3936 Part 4 for Forest Trees and as further described in the plant schedules.

SOIL CONDITIONS - Cultivate and plant into moist friable soil that is not waterlogged.

Do not plant into frozen or snow covered soil.

Carry out the work while soil and weather conditions are suitable for the relevant planting operations. Do not plant during periods of frost or strong winds.
